Personalized rehab plans, with your patient's voice built in.

Cornerstone is the workflow platform for exercise-based rehabilitation. Build personalized plans from a curated library, capture the metrics your specialty cares about, and see exactly how patients are responding — before their next visit.

[Sign in →](#)[See how it works](#)

Built for vestibular, balance, orthopedic, neuro, and pediatric rehab.

The screenshot displays the app interface for a patient named Maria Lopez. The URL bar shows 'app.cornerstone.health/patients/maria-lopez/tracking'. The patient's name 'Maria Lopez' is at the top, followed by 'Vestibular tier 2 · Week 4 of 6' and an 'Active' status badge. Below this, a 'THIS WEEK' section shows a calendar grid with days M, T, W, T, F, S, S. The status for each day is: M (green check), T (green check), W (orange dot), T (green check), F (green check), S (green check), and S (dash). A section titled 'Yesterday · Gaze stabilization' shows a progress indicator with three orange dots and two grey dots, followed by the text: 'Got dizzy after the second set, had to pause for a minute.'

PRODUCT

Built around how rehab actually works.

The clinical workflow — prescription, measurement, and patient feedback — done well, in one place.

Exercise prescription and tracking

Build personalized plans from a curated library — sets, reps, duration, equipment, instructions, and media. Reuse templates across the clinic. Track daily completion across a rolling 30-day calendar.

Symptoms and clinical metrics

Track patient symptoms over time. Define the metrics your specialty actually measures — range of motion, strength, pain scales — and record values per patient, per visit.

Hear what your patients are saying

Patients self-report completion, difficulty (1–5), and notes per exercise. Their feedback lands in a journal sorted by date — so you walk into the next visit knowing what worked, what hurt, and what to change.

WEARABLES

Exercise data, in context.

Maria Lopez

Last 7 days · synced via Terra

MTWTFSS

Pull steps, sleep, and resting heart rate from any compatible wearable. See your patient's whole week alongside the exercises you prescribed — and spot the pattern that matters before the next visit.

-  Daily steps and activity level
-  Sleep duration and quality
-  Resting heart rate trends
-  Connected via Terra — works with Apple Health, Fitbit, Garmin, Oura, and more.

 **Wednesday insight**
Poor sleep and elevated resting HR. Patient flagged dizziness during Thursday's balance exercises.

BUILT FOR THE WHOLE ORGANIZATION

Roles, permissions, multiple clinics — sorted.

Cornerstone has role-based access for super-admins, admins, clinicians, and patients. Each role sees only the data and actions they need — and the platform scales across multiple clinics in a single organization.

SUPER ADMIN

Org-wide users, clinics, and configuration. Full control.

ADMIN

CLINICIAN

Caseload, treatment plans, custom metrics, patient feedback.

PATIENT

Own treatment plan, exercise schedule, and tracking history.

Clinic-level patient and clinician management. Permissions, assignments.

Multi-clinic ready — assign clinicians and patients across multiple clinics within one organization.

HOW IT WORKS

Build. Track. Adjust.

01

Build

Create a treatment plan from a template, or assemble exercises from the library. Set sets, reps, duration, frequency — assign and explain in one flow.

02

Track

Patients log completion, pain or difficulty, and notes per exercise. Wearable data flows in alongside, giving the plan its full clinical picture.

03

Adjust

Open the journal before each visit. Use what patients said — and what your custom metrics show — to refine the plan with confidence.

BUILT FOR

Vestibular · Balance · Orthopedic · Neuro · Pediatric

Cornerstone

The clinical operations platform that turns prescribed therapy into measurable outcomes.
